The Remote Controlled Flex Spout gives you full 360° control of the discharge spout at the end of your auger. It is totally controlled from ground level.

With the Remote Controlled Flex Spout you can fill a truck box without moving or climbing into your truck. No more “Too far to one side” filling. It is also a big help when filling quonsets and rail cars. Fits virtually any auger or conveyor.

(A) In addition to reaching the corners it also lets you control the flow of grain into your bins. This means you won’t be moving the auger as much.

(B) An adjustable cam-lock secures the spout in any position.

(C) With nylon guides the Remote Controlled Flex Spout is easy to position and it is built to last. Easily installed on most grain augers and conveyors.
